

CUCUMBER SAFE TRELLISING SUPPORT / Scorpion Hook, 505ch

When a cucumber stem is laid over the wire it tends to bend or break. As a consequence, there is a significant reduction in the grade quality and quantity of yield. In addition, this kind of labor is time consuming and hard to maintain.

The Scorpion Hook allows the plant to be lowered and grown diagonally even at a low height, by placing the stem inside the Scorpion Hook itself. This product makes it possible to grow, work, and treat the plant from ground level, while supporting an efficient and healthy growth.

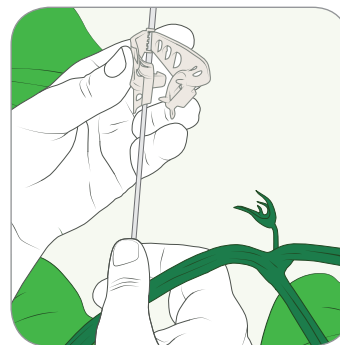

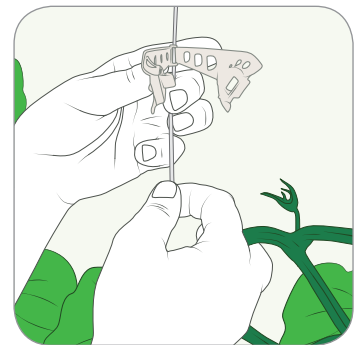

Advantages

Efficient labor

- Fast and easy hanging
- This hook is attached to the twine and not to the trellis wire which eliminates the need of climbing to the upper wire
- Easily installed from ground level
- Easy to re-open and re-locate
- Promotes grade A quality cucumbers
- Provides significant increase in quantity of yield
- Facilitates structured rows of plants
- Easy and quick disposal at the end of the season

Crop protection

- Prevents the stem from bending and breaking
- Supports the stem with a special inner curve structure

Instruction of use

- Hold the Scorpion Hook open, while the other hand holds the twine
- Insert the twine inside the hook
- Place the stem inside the Scorpion
- Close the Scorpion – for locking verification hear the “click” sound
